

## GLASS REINFORCED CEMENT PRODUCTS

*LEADING IMPORTERS AND DISTRIBUTORS  
OF PREMIUM QUALITY NATURAL SLATES AND GRC PRODUCTS*

Ornamental  
ridge tile

**Glass Reinforced Cement (GRC)** is an ideal material to use on variety of roofing structures. It is lightweight but tough, easy to fix and unaffected by environmental conditions.

This comprehensive range of wet and dry fix ridge tiles and finials are manufactured in glass reinforced cement (GRC) to the highest standards.

The ridges are manufactured to resemble either natural clay or fibre cement ridge and can be used on various hip or ridge detail.

Plain angle  
ridge tile

Composed principally of cement, sand and special alkali resistant (AR) glass fibres, GRC provides a high strength and durable product to suit most western climates.

The ridges and finials displayed on our product page are available in blue black and terracotta colour.

New to the market is our capped angle ridge tile for dry fix application.

Due to the innovative design this can be laid without the need for continuous vented strips along the ridge line, thus saving time and money.

### **Glass reinforced Cement**

- is impact resistant
- can reproduce colour and finish
- products are lightweight
- has excellent durability

Capped angle  
ridge tile

Babyridge

| GRC Product range       | Length in mm | Angle available             |
|-------------------------|--------------|-----------------------------|
| Capped angle ridge tile | 450          | 90°, 105°, 115°, 125°       |
| Plain angle ridge tile  | 450          | 90°, 105°, 115°, 125°, 135° |
| Babyridge               | 300          | universal angle             |
| Ornamental range        | 450          | universal angle             |
