

SPANISH SLATE LOS CAMPOS

*LEADING IMPORTERS AND DISTRIBUTORS
OF PREMIUM QUALITY NATURAL SLATES*

Natural slate has naturally formed over millions of years. Its high quality offers exceptional weathering properties and is maintenance free.

Los Campos Slate is grey colour with a slightly rough and homogeneous surface; it has no other metallic minerals. Its main minerals are: sericite, quartz, chlorite and muscovite.

It also has tourmaline, zircon, plagioclases and opaque minerals as secondary elements. Its use is recommended for covers in all climates and weather conditions.

Geological features:

they determine its superb qualities, aesthetic as well as practical

Waterproof: it fulfils this property perfectly well because it is compact and pore-exempt, thus avoiding cracking caused by frost.

Inalterable: it remains unchanged under wind, dust, salt residue, cold, heat, snow and humidity.

Economical: the cost is very competitive, good value for money when compared to the cost of any other covering or roofing material.

Formats: many different formats can be produced taking into consideration the architectonic customs and aesthetic tastes of each different region or country. The quarry can produce any format made-to-measure if requested by order. For the UK and Ireland they produce the following sizes: 60x30 (24x12"), 50x25 (20x10"), 40x25 (16x10") and 40x20 (16x8").

SPANISH SLATE LOS CAMPOS Physical-mechanical features:

Volumen Mass	2.80grs/cm ³
Water-absorption coefficient:	0.20 %
Mechanical resistance to flexion:	350-500Kg/cm ²
Frost resistance	No alterations are appreciated
Temperature change resistance:	No alterations are appreciated
Acid resistance:	No alterations are appreciated
Carbonate contents:	0.0 %
